Customer Story

Switch to geothermal reduces heating costs and brings in AC

When Bill and Jackie moved into their current home, they knew that they needed the appropriate upgrades to help them save money on energy costs and produce cleaner energy. This included replacing a 40-year old oil furnace with a more efficient geothermal system. Financing through the Smart-E loan helped the family take charge on installing these upgrades and initiate savings on energy costs. Now, they have an energy efficient system that also provides air conditioning.

"I never imagined switching from an oil furnace to a ground source heat pump could make such a difference. Not only is my home more comfortable, but the savings on heating costs have been significant. It's a change that feels good both for my wallet and the environment, and I don't have to spend time searching for the best oil price."

Bill and Jackie

Location

Weston, CT

Energy Upgrade

Ground source heat pump

Estimated Savings

\$200 a month
